

# ACTIVE OWNERSHIP REPORT

ROBECO | 01.07.2021 - 30.09.2021

Prepared on behalf of

**Q**3 2021

Sustainable Investing Expertise by

**SAM TURNER** – Head of Responsible Investing, St. James's Place

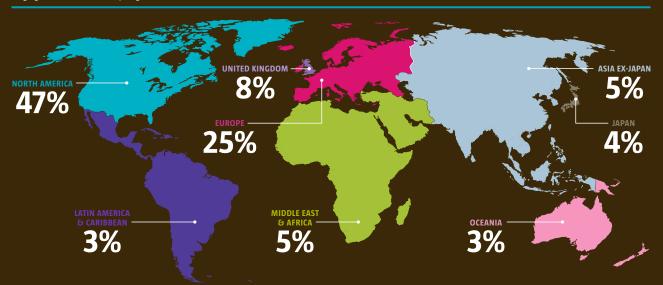

We, at Robeco, look forward to working with St. James's Place. This quarter marks the beginning of a partnership between St. James's Place and Robeco, based on our shared commitment to responsible investing. Through the partnership, Robeco will conduct engagements on behalf of St. James's Place. These engagements will focus on steering companies to make positive changes in material environmental, social and governance focus areas. This customised report will show the main highlights of these engagements.

### **Q3 21 ENGAGEMENTS** ON BEHALF OF ST. JAMES'S PLACE

**Engagement activities by region**

### CONTENTS

### Human Rights Due Diligence

This quarter marks the launch of our engagement project on human rights due diligence. We have carried out an in-depth research project focused on companies active in conflict-affected or high-risk areas, aiming to minimize the adverse impact of their business activities on people. In this Q&A, Daniëlle Essink describes why we are launching this theme and what our goals are.

### **Food Security**

For the last three years, we have sought out an active dialogue with companies across the food supply chain to better understand their role in ensuring food security across the globe. Concluding the engagement theme, Laura Bosch reflects on how the different companies have each started to contribute to render the global food system more resilient.

### **Biodiversity**

Biodiversity loss is considered one of most impactful risks facing both our planet and global economy today. Over the last years, Robeco has proactively made use of its voice and expertise to advance the biodiversity agenda. In this article, Peter van der Werf explains what challenges companies face in addressing commodity-driven deforestation.

### Cybersecurity

As digitalization expands far beyond the tech realm, so do the associated cyber threats. Therefore, we have followed several companies in their journey to strengthen their cybersecurity. This year marks the end of Robeco's three-year cybersecurity engagement. Carolina Vergroesen shares our main insights and results.

13

### INTRODUCTION

We are honoured to have St. James's Place as a new partner and to share our journey towards a more sustainable future with them. We are looking forward to the years to come, where we can share our stewardship expertise with them and jointly steer positive change.

Over the course of the third quarter, environmental, social, and governance (ESG) topics continued to be in the spotlight, and the pressure to act on a variety of issues is growing steadily.

The publication of the Intergovernmental Panel on Climate Change (IPCC)'s Sixth Assessment Report, as well as the recent string of natural disasters in the form of major floods, heatwaves, wildfires and storms emphasize the urgency of climate action. Robeco's Active Ownership program continues to build on our long history of climate engagement. While climate action remains a major focus, this Q3 report highlights our engagement efforts on other key ESG fronts.

Besides climate change, another major environmental challenge is the rapid global decline in biodiversity. In 2020, Robeco initiated an engagement with several companies producing commodities closely linked to biodiversity loss. As we near the halfway mark of this engagement theme, this report explains how we are pushing companies to make biodiversity management a priority.

In this report we also introduce our new Enhanced Human Rights Due Diligence engagement theme. The engagement will focus on the challenges of protecting human rights while operating in conflict areas. Companies operating in these markets need to have robust human rights due diligence systems in place to navigate the challenging market environments. As digitalization expands far beyond the tech realm, so do its associated cyber threats. In 2018, Robeco initiated an engagement to gain better insights into how companies across industries manage these increasing risks related to cybersecurity. After concluding our three-year engagement, we share our main insights and results.

During our three-year food security engagement with the agricultural supply chain, we saw incremental improvements, some of which were however significantly impacted by the pandemic. Despite this recent setback, we have seen progress of companies' sustainability governance, corporate contribution to the UN's Sustainable Development Goals (SDGs), and around public-private partnerships. As the theme comes to a close, we reflect on the progress achieved and the challenges that remain.

A brand-new addition to our engagement universe is the launch of our SDG theme. The engagements under this theme will tackle the most material ESG issues in order to improve the companies' impact on the SDGs.

The breadth of our active ownership program demonstrated in this customised report underpins our and our partner's commitment to be a responsible steward. We are proud to present the results of our first quarter of this partnership and look forward to many more to come.

### Carola van Lamoen

Head of Sustainable Investing

## 'Conflict-affected or high-risk areas pose challenges to continuously act responsibly and safeguard human rights'

### HUMAN RIGHTS DUE DILIGENCE

**INTERVIEW WITH DANIËLLE ESSINK** – Engagement Specialist

This quarter marks the launch of our engagement project on human rights due diligence, being an important topic for Robeco and our clients. To prevent providing capital to companies exposed to human rights violations, we have carried out an in-depth research project focused on companies active in conflict-affected or high-risk areas, aiming to minimize the adverse impact of their business activities on people. In this Q&A, Daniëlle Essink describes why we are launching this theme and what our goals are. *Why are we launching this engagement theme?* 

How will you assess which companies should be under engagement?

Over the past years, human rights have become increasingly at risk around the world. This development has further emphasized the importance of the 'S' in ESG and the obligations of companies and investors to respect human rights. Especially conflict-affected or high-risk areas pose challenges to continuously act responsibly and safeguard human rights. Our engagement theme aims to highlight human rights risks in our portfolio and strengthen risk management systems. For the financial year 2021, the World Bank has determined a non-exhaustive list of at least 39 countries that are in either a fragile or conflict-affected state<sup>1</sup>. This list includes, for example, Myanmar, which experienced a coup d'état in 2021 and deteriorated in Freedom Houses' democracy ranking - which measures countries and territories civil liberties and political rights - from 'partly free' to 'not free', increasing the concerns in the international as well as in the business community<sup>2</sup>. Most public services in the country are shut down and hundreds of pro-democracy protesters have been killed by military forces. Due to the military's broad involvement in the private sector, companies need to closely evaluate how their products or services may be tied to the military and thus might impact human rights. Generally, the OECD Guidelines for Multinational Enterprises distinguish between companies that are causing, contributing, or that are directly linked to doing harm. There are multiple ways in which companies can have an impact on human rights considering their sector, business model, products or services.

Robeco has developed a proprietary methodology to evaluate the human rights risk exposure and due diligence efforts of our portfolio companies. We analyze companies human rights policies, their grievance mechanisms and remediation measures as well as the presence of a context analysis of high-risk regions in which they operate, among other things. Input from our data providers and in-house research further points us towards the most salient human rights issues in our portfolio. We will engage with these companies to continuously ensure alignment with the best practices laid out in the UN Guiding Principles on Business and Human Rights. Additionally, we will maintain a watchlist to persistently monitor companies that are active in these regions.

The World Bank (2021), FY21 List of Fragile and Conflict-affected Situations.
Freedom House (2021), Freedom in the World – Myanmar.

'COMPANIES THAT ARE INVOLVED WITH STAKEHOLDERS LINKED TO HUMAN RIGHTS ABUSES MAY SEE THEIR PRODUCTS BOYCOTTED AND THEIR FUTURE SOCIAL LICENSE TO OPERATE IN JEOPARDY'

DANIËLLE ESSINK

### Do some sectors or operating environments result in higher human rights risks?

Although the definition of conflict-affected or high-risk areas is frequently used to bundle all risks that stem from these regions, we specifically analyze and recognize the different risks that some sectors or business models may expose a company to.

We identify red flags in countries or regions with ongoing conflicts, reports of forced labor in the supply chain of specific industries or instances of humanitarian or international law breaches. Although these risks may seem decoupled from the overall business operation, it is important to recognize that risks may first materialize over time. Countries such as Myanmar highlight how businesses may, even unknowingly, be linked to human rights impacts. The military has broad economic interests and has captured many parts of the private sector through their own conglomerates, exposing companies that are engaged with them to significant risks.

Furthermore, sectors with complex supply chains such as the apparel sector have been exposed to increased risks. Allegations of forced labor in specific geographical locations in which companies' supply chains are active, such as Xinjiang, increase the urgency of companies to implement robust human rights due diligence measures, and to meet rising regulatory demands as well as satisfy consumer demands for transparency.

Ongoing and complex conflict dynamics such as between Israel and Palestine also expose businesses to a variety of risks. Multiple UN resolutions have deemed the occupation of parts of the West Bank to be in breach of international law and of the UN Human Rights Treaty, for example. Although this might appear to be a matter that needs to be solved between nations and international institutions, the Human Rights Council has laid out a diverse range of sectors and activities in which businesses may also be directly linked or contribute to human rights impacts. Examples include supplying materials that aid the expansion of settlements, or the use of natural resources such as water and land for business purposes.

We believe that all companies have a responsibility to respect human rights, uphold policy commitments and act upon the guidance laid out in the UN Guiding Principles on Business and Human Rights and other international standards. Poor and inadequate management of human rights risks could have an impact on people and expose businesses as well as investors to legal, operational and reputational risks. This can have a direct negative impact on their license to operate.

In many industries, supply chains may span multiple countries and involve several layers of commercial relationships. A growing concern is that parts of these supply chains are located in conflict-affected or high-risk areas with low labor standards and a lack of transparency. Laws targeting increased disclosure of supply chains are becoming more prominent, with a German supply chain law commencing in 2023 as well as proposals by the UK and Australia which would require companies to disclose issues related to modern slavery and forced labor. Furthermore, the US has placed suppliers who have alleged ties to forced labor on their entity list, and have also banned the import of products from places that are suspected of using forced labor. The liability of companies involved in human rights impact is harder to gauge as it is still uncommon for firms to be prosecuted, yet the economic impact of these import halts is significant.

Why should investors address human rights concerns (and what risks may stem from neglecting this)? But even without legal action, reputational risks are almost always present when a company's operations have a negative impact on people. Companies that are involved with stakeholders linked to human rights abuses may see their products boycotted and their future social license to operate in jeopardy. Additionally, consumers may specifically avoid products of a company linked to allegations of forced labor.

Due to the specific context of conflict-affected and high-risk areas, some engagements may have increased hurdles due to the political landscape. Israel and the US, for example, have laws which may constrict companies in their ability to disengage through their anti-boycott laws. Furthermore, some companies that have acknowledged the increased risks they may potentially face by producing or sourcing from Xinjiang have faced consumer backlash in the Chinese market. Additionally, lack of reliable information may increase the difficulties of building an effective engagement case.

In many cases engagement with companies on adverse impact on human rights takes place in a reactive manner. With this engagement theme we aim to collaborate with our portfolio companies to highlight the importance of a more proactive approach. This includes carrying out enhanced human rights due diligence when entering new markets or engaging in joint ventures. Through the different processes embedded in an enhanced due diligence approach such as a thorough contextual analysis, we believe companies will have the necessary tools to perceive risks before they materialize and avoid contributing to negative impacts on human rights and associated legal, reputational and operational repercussions.

Assessing companies with a pre-defined methodology will allow us to compare performances, analyze shared difficulties and gain a better understanding of best practices. Our engagements are focused on the gaps we identify for each company such as a lack of reporting, undisclosed performance measures or lack of access to appropriate remediation. We believe this combination of proactive improvements to human rights management systems and responses to conflict-affected and high-risk situations that respect human rights will help mitigate risk and minimize the negative impact on people.

What challenges do you expect to face when engaging with companies in conflict-affected or high risk areas??

What are the outcomes you expect to achieve through this engagement theme?

# Addressing food insecurity at its roots

### **FOOD SECURITY**

**LAURA BOSCH** – Engagement specialist

The world is facing ever-growing pressure on our global food system. With the global population set to reach 9.7 billion by 2050, demand for food is projected to grow between 25% and 70% over the next 30 years. Climate change and crop productivity are just a few of the factors that exacerbate the challenge of feeding tomorrow's population. As a result, food security has become a priority for sustainable development.

**'THESE PRODUCTS ALSO NEED TO BE ADAPTED TO THE CONCRETE NEEDS OF SMALLHOLDER FARMERS, WHICH USUALLY TRANSLATES INTO THE USE OF LOWER HORSEPOWER TRACTORS AND OTHER EQUIPMENT'** 

LAURA BOSCH

Improvements in food security have been reversed due to the disruptions caused by Covid-19 in our economies, job markets and remittances from overseas workers to low- and middle-income countries. Acute food insecurity has increased by 82% compared to the pre-pandemic period, impacting 270 million people by now. A decline in crop productivity due to soil degradation and climate change, and the productivity challenges faced by smallholder farmers are some of the key reasons behind ubiquitous food insecurity rates. Malnutrition weighs heavily on economic development and public health, at an estimated annual cost of USD 3.5 trillion to the global economy. Achieving SDG 2 of 'Zero Hunger' remains one of the key global challenges for the decade to come.

#### **Engagement focus**

Investors need to consider the topic of food security in the light of broader sustainable development, which companies in the food value chain can influence significantly and benefit from. In 2018, we initiated an engagement program focused on advancing the corporate contribution to food security, targeting companies in the agrochemical, commodity trading, agricultural mechanization, and irrigation sectors. Our dialogues were framed around engagement objectives on sustainability reporting and transparency, product portfolios and the geographic distribution of operations, innovation management and public-private partnerships.

Nearly two-thirds of the dialogues were successfully closed after our three-year engagement period concluded in September 2021. The most progress was achieved in formalizing the companies' sustainability governance, measuring their corporate contribution to the SDGs, and exploring new market opportunities in food-insecure regions through public-private partnerships.

#### Winners and losers

One of the most important factors contributing to food insecurity is farmer productivity, or the lack thereof. Productivity depends in large part on farmers' access to advanced farming inputs such as machinery and seeds. There are differences in input quality and availability across markets as farmers in low- and middle-income countries struggle to access high-quality farming machinery, crop protection products and seed varieties.

Agrochemical and irrigation system companies in our engagement group managed to demonstrate the most progress against our engagement objectives. The affordability and accessibility of their products place these companies in a better position when it comes to promoting their products in food-insecure regions. Key challenges for these sectors relate to effectively penetrating a market comprised by smallholder farmers, for which public-private partnerships are a useful tool to connect with this customer base.

On the other hand, food processors and commodity trading companies were not able to increase their impact on tackling food insecurity. These sectors have the potential to be an active participant in developing economies' agricultural sectors by giving smallholder farmers access to their offerings. However, limited evidence was found on how smallholder farmers are tied into the offerings of these companies. Our engagement dialogues with the two companies operating in these sectors were closed unsuccessfully.

For agricultural machinery companies, progress against our engagement objectives was more mixed, as we managed to successfully close two-thirds of the dialogues. Agricultural machinery requires a sizeable investment, and it takes a long period to reap a profit, which in many cases is not economically feasible for smallholder farmers. Despite this challenge, most companies identified the business opportunities that will materialize in low- and middle-income countries if the mechanization gap is closed in the coming decades. Being able to partner up with local players to provide financial support to farmers is crucial for ensuring accessibility to their products. These products also need to be adapted to the concrete needs of smallholder farmers, which usually translates into the use of lower horsepower tractors and other equipment.

#### **Progress and areas for improvement**

Companies' ability to contribute to food security depends in large part on the internal sustainability structures and processes they have in place. One-third of the companies in our engagement group were very open to explore how they can enhance their reporting practices and requested our feedback on how to do this, along with how to create concrete SDG mapping and reporting tools.

Yet, only one-quarter of companies under engagement managed to incorporate their contribution to food security in their business strategy and to set timebound and measurable SDG 2-linked targets, as well as to adapt their business and marketing models to the needs of food-insecure regions. Progress in this area was concentrated among agrochemical and irrigation companies.

#### What's next

Food security is fundamentally linked to biodiversity and agricultural production. The benefits of healthy ecosystems, such as superior soil quality or pollination, are critical to ensuring sustainable crop productivity. Yet, predominant patterns of agricultural growth such as the application of monocultures or the overuse of agrichemicals have eroded biodiversity, are causing economic loss, jeopardizing productivity and food security, and are leading to broader social costs.

In the coming year, the 15th meeting of the Conference of the Parties (COP 15) to the Convention on Biological Diversity will negotiate a framework equivalent to the one that the Paris Agreement provided for climate change for all member states. This would provide a clear roadmap for how to reverse nature loss in the next decade. While climate change and carbon emissions have found their way into companies' standard accounting over recent years, there will be a clear need to measure the impacts and dependencies of companies on biodiversity. This level of transparency would help organizations to act on their biodiversity footprint, helping to tackle other interconnected global challenges such as climate change or food security.

#### CASE STUDY

The agricultural machinery producer Deere & Co. managed to adapt its conventional tractors to service the needs of smallholder farmers. India constitutes a hub for the company's small tractor business, which manufactures tractors of 20-35 horsepower. Sales of tractors with lower horsepower represent 10-15% of global tractor sales.

Deere & Co. has been allocating R&D expenditures for developing products tailored to low- and middle-income countries. Our engagement objective focused on 'innovation management' was successfully closed due to evidence of the company's efforts to support farmer productivity and incomes in food-insecure region.

# Safeguarding the natural balance

### BIODIVERSITY

**PETER VAN DER WERF** – Engagement specialist

Biodiversity loss is increasingly being recognized as a global systemic risk by investors, in addition to climate change. The concept and value of biodiversity have long been overlooked by the global financial industry. Defined as the diversity within and between species and their ecosystems, biodiversity is at the core of the delicate natural balance which for millions of years has ensured that Earth has remained habitable for us and the other species with whom we share the planet. Without biodiversity, nature cannot provide goods and services that are worth trillions of euros. Strong ecosystem health is indispensable for food security, disease prevention, clean water provision, and much more. Yet in the Anthropocene, both climate change and biodiversity loss are accelerating faster than ever before: the current rate of extinction is tens to hundreds of times higher than the average over the past 10 million years. As a result, the World Economic Forum ranks biodiversity loss as the third most impactful risk facing the global economy, and the fourth most likely to occur.

### Commodity-driven deforestation as a key driver of biodiversity loss

The habitat destruction caused by land-use change for agricultural purposes is one of the major contributors to biodiversity loss. Thus, in order to reduce the current rate of extinction and preserve biodiversity, it is critical to halt commodity-driven deforestation. Our biodiversity-focused engagement work aims to improve the sourcing and production practices of companies whose supply chains are exposed to high-risk commodities. These key agricultural and livestock products – natural rubber, soy, beef, tropical timber, and pulp – are closely linked to deforestation and environmental degradation.

### First steps towards traceability in the Brazilian beef industry

The beef industry in Brazil has a track record of high deforestation. However, our long-standing dialogue with some of the main beef producers is starting to bear fruit. These companies used to have a defensive approach when discussing their involvement in deforestation and the negative environmental footprint of their products. Recently, however, we have started to see a shift, as companies are beginning to hold themselves more and more accountable and are committing to achieve full traceability in their supply chain by 2025.

To reduce biodiversity loss, it is crucial for companies to have oversight of whether deforestation occurs at the farmer-level, where calves are raised, or at any other parts of the supply chain before the cattle are sold to the slaughterhouse. Both beef producers in our program have adopted blockchain technology to develop proprietary platforms for their suppliers to track all supply chain movements of their cattle. However, for now this is only on a voluntary basis as the companies operating slaughterhouses globally find that mandatory transparency would be a financial risk due to the potential loss of access to cattle on the spot market.

### Tire manufacturers struggle to prevent deforestation by rubber producers

In Southeast Asia, progress in achieving a reduction in deforestation rates is still minimal. This is mainly linked to the rubber supply chain of car tire manufacturers. These companies continue to struggle with implementing transparency practices that are more widely used in other supply chains, such as enhanced traceability and monitoring of suppliers. Nevertheless, most tire manufacturers are now part of the Global Platform for Sustainable Natural Rubber (GPSNR), an international, membership-driven platform set up to define sustainability standards for the natural rubber value chain. This platform is helping companies to start setting up concrete policies and commitments to tackle the environmental and social challenges in the natural rubber supply chain.

### **Robeco to champion the launch of Nature Action 100**

In addition to our engagement work on halting deforestation, Robeco is actively participating in various global efforts to prevent biodiversity loss. We contributed to the informal working group to prepare the launch of the Taskforce Nature-related Financial Disclosure (TNFD), we joined the Platform Biodiversity Accounting Financials (PBAF), and collaborated with the Cambridge Institute for Sustainable Leadership's (CISL) biodiversity risk working group to advance academic research. All of these efforts contribute towards our commitment to the Finance for Biodiversity pledge which we signed in September 2020. Through this pledge, Robeco

> 'THROUGH [THE FINANCE FOR BIODIVERSITY] PLEDGE, ROBECO HAS COMMITTED TO ALIGN ITS INVESTMENTS WITH THE GLOBAL BIODIVERSITY FRAMEWORK [WHICH] CALLS FOR NO NET LOSS IN BIODIVERSITY BY 2030 AND TO BE NATURE-POSITIVE BY 2050'

PETER VAN DER WERF

has committed to align its investments with the Global Biodiversity Framework that will be negotiated by governments around the world in April 2022 in Kunming, China. This framework calls for no net loss in biodiversity by 2030 and to be nature-positive by 2050.

Furthermore, the Finance for Biodiversity pledge calls upon signatories to seek collaborative engagements to safeguard biodiversity. That is why Robeco, together with a core group of investors, is driving the development of Nature Action 100. This program, building on the lessons learned from Climate Action 100+, seeks to work with research organizations and conservation NGOs to develop a list of the 100 companies with the largest impacts and dependencies on biodiversity. Global investors will be invited to sign up to the program and lead individual dialogues on behalf of the global investor community.

Robeco will represent its clients in this effort and seeks to complement its existing engagement program on biodiversity, as the common goal of these dialogues will be to prepare companies to proactively address biodiversity loss by establishing strong governance structures and committing to biodiversity policies. The engagements should ultimately lead the way for companies to adopt the TNFD when it is launched in 2023. The urgency and magnitude of biodiversity loss calls for comprehensive global action, and the financial industry can play a pivotal role in harnessing the corporate support for the Global Biodiversity Framework.

#### CASE STUDY

At the end of 2020 we filed a shareholder resolution for Archer Daniels Midland's (ADM) 2021 shareholder meeting, asking the company to step up its efforts to eliminate deforestation in its soy supply chain. After several weeks of intense negotiations, spanning across multiple meetings with ADM's head of sustainability and corporate secretary, we managed to get the company to agree to most of the key asks included in our withdraw criteria proposal and we withdrew the proposal from the ballot of the AGM. Our achievement was to ensure that ADM published a revised no-deforestation policy, committing to eliminate deforestation from all their supply chains by 2030.

# Fortifying digital assets

### CYBERSECURITY

CAROLINA VERGROESEN – Engagement specialis

As digitalization expands far beyond the tech realm, so do the associated cyber threats. Cybercrime can include anything from small, local security incidents with minor consequences to cyberattacks which can disturb significant parts of the global economy. In recent years, the costs related to cybercrime have grown exponentially from USD 500 billion in 2017 to an estimated USD 6 trillion globally for 2020. Any company with digital operations should therefore fortify and protect its digital assets, or risk losing big time. Lax cybersecurity practices represent a clear and present threat to company business models. Whilst these risks have become distinct in recent years, less clarity exists on the steps taken by companies to mitigate such risks. In 2018, Robeco's Active Ownership team started to engage with companies on these issues, with the aim of promoting best practices in cyber-risk management and better understanding the approaches taken by a peer group of portfolio companies. We started out with 11 companies in the payments, telecom, and household products sectors, as these companies operate using sensitive customer data or have experienced significant data breaches. Two companies were dropped due to either poor financial results leading to divestment or mergers/ acquisitions. In the end, we concluded our engagement with nine companies, out of which seven cases were concluded successfully.

### Companies remain reluctant to provide full transparency on cybersecurity

The theme focused on five topics: governance & oversight, policy & procedure, risk management & controls, transparency & disclosure, and privacy by design. Most companies in our engagement peer group acknowledged the risks related to cybercrime, but their approaches to this risk differed vastly. Whereas some companies considered it to be a top priority and an essential part of their license to operate, others saw it as merely one of many business risks. This variety resulted in clearly different success rates for our various objectives.

The governance and oversight objective focused on the highest tier of cyber management at the board and executive level. Nearly 80% of all companies had a clear strategy and governance hierarchy in place for managing cybersecurity. However, several transparency topics proved more challenging as most companies preferred to keep their cards close to their chest. This is understandable given that hackers can more easily circumvent barriers if they know exactly which security systems are in place. This hesitancy to provide information affected our success rate for our policy & procedure (56%) and transparency (56%) objectives in particular, where we closed only slightly more than half of the companies successfully.

### Progress visible in operationalizing cybersecurity risk management

Although companies hesitated to disclose their particular response to cyber threats, they were more open to discussing the sensitivity and integrity of their security controls. Several companies have dedicated teams that regularly test their company's defenses in order to identify possible gaps in their current practices. We found this especially encouraging as the threat landscape is continuously changing and companies should be prepared to adapt their security accordingly and respond quickly to emerging threats.

### Legislation increasingly protects sensitive customer data

Not every data breach is created equally and those involving personally identifiable information (PII) are especially harmful not only for companies but especially for those individuals whose data has been leaked. Companies need to be clear to their customers what type of data is collected and for what purpose, as well as inform their customers when there has been an accidental breach. This has become increasingly important as data privacy has received global attention in recent years and has led to the introduction of the EU's General Data Protection Regulation (GDPR), which is applicable to all companies globally if they serve EU customers. We therefore expected companies to have robust privacy policies in place, but although most companies had some form of privacy policy in place, the quality of these policies varied substantially. Whereas some were global and very detailed, others were local and only met legal requirements rather than being truly informative for clients. Overall, we closed 67% of companies successfully for the privacy by design objective.

### Cybersecurity becomes more material for all sectors, given the trend of digitalization

In the past three years of engagement, cybersecurity has continued to garner global importance and we expect this trend to continue as companies across the globe expand their digital presence. We are encouraged to see that nearly 80% of countries worldwide have cybersecurity legislation in place. Continued expansion of this legislation is crucial in ensuring clear standards for companies to adhere to. Although several of the companies under engagement

> 'SEVERAL TRANSPARENCY TOPICS PROVED MORE CHALLENGING AS MOST COMPANIES PREFERRED TO KEEP THEIR CARDS CLOSE TO THEIR CHEST. THIS IS UNDERSTANDABLE GIVEN THAT HACKERS CAN MORE EASILY CIRCUMVENT BARRIERS IF THEY KNOW EXACTLY WHICH SECURITY SYSTEMS ARE IN PLACE'

**CAROLINA VERGROESEN** 

went far beyond legal requirements, many cyber strategies were directly linked to specific legislation. As cyber standards are raised globally, companies will have to vie for talent. A global report from the Information Systems Security Association shows that the gap between demand and supply for cybersecurity skills is persisting, for the fifth consecutive year in 2021. We believe companies should therefore focus on the development of cyber skills within their organizations, as simply acquiring outside talent might prove to be a difficult challenge. Although this engagement has come to a close, we continue to see the importance of cybersecurity across industries. Specifically, our engagement themes on the digitalization of healthcare and the social impact of AI continue to focus on companies' diligent implementation of cybersecurity and data privacy practices.

#### CASE STUDY

One of the companies in our peer group that scored well on most engagement objectives is Visa. An exemplary approach to cyber governance & oversight is embodied in the Audit & Risk committee overseeing related risks and the significant technology experience on the board. Over the course of our engagement, Visa committed to improve its reporting on how cyber risks are addressed throughout the company, including details on how cybersecurity is included in the executive compensation criteria. Another best practice is that the company holds third party assessments on the maturity of its program, with high scores compared to its peers.

Golden Agri-Resources

### **Global Controversy Engagement**

During the quarter, 3 companies were engaged based on potential breaches of the UN Global Compact and/or the OECD Guidelines for Multinational Enterprises.

#### Notes

The companies listed above represent all holdings from St. James's Place with an open engagement dialogue. Companies are listed in chronological order based on their first engagement activity and are captured by each open theme in Robeco's yearly engagement cycle.

#### Important information

Robeco Institutional Asset Management B.V. (Robeco B.V.) is authorised by The Netherlands Authority for the Financial Markets in Amsterdam. Robeco is deemed authorised and regulated by the Financial Conduct Authority. Details of the Temporary Permissions Regime, which allows EEA-based firms to operate in the UK for a limited period while seeking full authorisation, are available on the Financial Conduct Authority's website. This document is solely intended for St. James's Place and their partners and clients. Robeco B.V and/or its related, affiliated and subsidiary companies, ("Robeco"), will not be liable for any damages arising out of the use of this document. The contents of this document are based upon sources of information believed to be reliable and comes without warranties of any kind. Any opinions, estimates or forecasts may be changed at any time without prior notice and readers are expected to take that into consideration when deciding what weight to apply to the document's contents.
